

# Vaccine rate mini project

Groot (PID: A15485151)

11/23/2021

Get started

```
# Import vaccination data
vax <- read.csv("covid19vaccinesbyzipcode_test.csv")
head(vax)
```

```
##   as_of_date zip_code_tabulation_area local_health_jurisdiction   county

## 5                        NA
## 6                        NA
```

```
## percent_of_population_with_1_plus_dose
## 1 0.015452
## 2 NA
## 3 NA
## 4 NA
## 5 NA
## 6 NA
## redacted
## 1 No
## 2 Information redacted in accordance with CA state privacy requirements
## 3 Information redacted in accordance with CA state privacy requirements
## 4 Information redacted in accordance with CA state privacy requirements
## 5 Information redacted in accordance with CA state privacy requirements
## 6 Information redacted in accordance with CA state privacy requirements
```

## Ensure the date column is useful

We will use the **lubridate** package to make life a lot easier when dealing with dates and times

```
#install.packages("lubridate")
library(lubridate )
```

```
##
## Attaching package: 'lubridate'

## The following objects are masked from 'package:base':
##
## date, intersect, setdiff, union
```

```
today()
```

```
## [1] "2021-11-23"
```

Here we make our 'as\_of\_date' column lubridate format

```
# Specify that we are using the Year-month-day format
vax$as_of_date <- ymd(vax$as_of_date)
```

Now I can do useful math with dates easily:

Q. How many days since the first entry?

```
today() - vax$as_of_date[1]
```

```
## Time difference of 322 days
```

```
322 days
```

Q. How many days since the last entry?

```
today() - vax$as_of_date[nrow(vax)]
```

```
## Time difference of 7 days
```

7 days

Q1. What column details the total number of people fully vaccinated?

```
colnames(vax)
```

```
## [1] "as_of_date"
## [2] "zip_code_tabulation_area"
## [3] "local_health_jurisdiction"
## [4] "county"
## [5] "vaccine_equity_metric_quartile"
## [6] "vem_source"
## [7] "age12_plus_population"
## [8] "age5_plus_population"
## [9] "persons_fully_vaccinated"
## [10] "persons_partially_vaccinated"
## [11] "percent_of_population_fully_vaccinated"
## [12] "percent_of_population_partially_vaccinated"
## [13] "percent_of_population_with_1_plus_dose"
## [14] "redacted"
```

“persons\_fully\_vaccinated”

Q2. What column details the Zip code tabulation area?

“zip\_code\_tabulation\_area”

Q3. What is the earliest date in this dataset?

```
min(vax$as_of_date)
```

```
## [1] "2021-01-05"
```

“2021-01-05”

Q4. What is the latest date in this dataset?

```
max(vax$as_of_date)
```

```
## [1] "2021-11-16"
```

“2021-11-16”

```
skimr::skim(vax)
```

Table 1: Data summary

Name	vax
Number of rows	81144
Number of columns	14
Column type frequency:	
character	4
Date	1
numeric	9
Group variables	None

#### Variable type: character

skim_variable	n_missing	complete_rate	min	max	empty	n_unique	whitespace
local_health_jurisdiction	0	1	0	15	230	62	0
county	0	1	0	15	230	59	0
vem_source	0	1	15	26	0	3	0
redacted	0	1	2	69	0	2	0

#### Variable type: Date

skim_variable	n_missing	complete_rate	min	max	median	n_unique
as_of_date	0	1	2021-01-05	2021-11-16	2021-06-11	46

#### Variable type: numeric

skim_variable	n_missing	complete_rate	mean	sd	p0	p25	p50	p75	p100	hist
zip_code_tabulation_area	0	1.00	93665.111817.39	90001	92257.7593658.5095380.5097635.0					
vaccine_equity_metric_quarter	0	0.95	2.44	1.11	1	1.00	2.00	3.00	4.0	
age12_plus_population	0	1.00	18895.0418993.94	0	1346.95	13685.1031756.1288556.7				
age5_plus_population	0	1.00	20875.2421106.05	0	1460.50	15364.0034877.00101902.0				
persons_fully_vaccinated	8256	0.90	9456.49 11498.25	11	506.00	4105.00	15859.0071078.0			
persons_partially_vaccinated	8256	0.90	1900.61 2113.07	11	200.00	1271.00	2893.00 20185.0			
percent_of_population_fully_vaccinated	8256	0.90	0.42	0.27	0	0.19	0.44	0.62	1.0	
percent_of_population_partially_vaccinated	8256	0.90	0.10	0.10	0	0.06	0.07	0.11	1.0	
percent_of_population_with_8256plus_dose	8256	0.90	0.50	0.26	0	0.30	0.53	0.70	1.0	

Q5. How many numeric columns are in this dataset?

9 numeric columns

Q6. Note that there are “missing values” in the dataset. How many NA values there in the persons\_fully\_vaccinated column?

8256 NA values

Q7. What percent of persons\_fully\_vaccinated values are missing (to 2 significant figures)?

10% of persons\_fully\_vaccinated values are missing

Q8. [Optional]: Why might this data be missing?

maybe non-compliance to data submission/sharing?

Q9. How many days have passed since the last update of the dataset?

```
today() - vax$as_of_date[nrow(vax)]
```

```
## Time difference of 7 days
```

7 days

Q10. How many unique dates are in the dataset (i.e. how many different dates are detailed)?

```
length(unique(vax$as_of_date))
```

```
## [1] 46
```

46 unique dates

## Working with zip codes

We will use the **zipcodeR** package to help make sense of zip codes

```
#install.packages("zipcodeR")
library(zipcodeR)
geocode_zip('92037')
```

```
## # A tibble: 1 x 3
##   zipcode lat lng
##   <chr>   <dbl> <dbl>
## 1 92037   32.8 -117.
```

Calculate the distance between the centroids of any two ZIP codes in miles, e.g.

```
zip_distance('92037', '92109')
```

```
##   zipcode_a zipcode_b distance
## 1      92037      92109      2.33
```

More usefully, we can pull census data about ZIP code areas (including median household income etc.). For example:

```
reverse_zipcode(c('92037', "92109") )
```

```
## # A tibble: 2 x 24
##   zipcode zipcode_type major_city post_office_city common_city_list county state
##   <chr>    <chr>        <chr>    <chr>                <blob> <chr>  <chr>
## 1 92037    Standard      La Jolla  La Jolla, CA          <raw 20 B> San D~ CA
## 2 92109    Standard      San Diego San Diego, CA          <raw 21 B> San D~ CA
## # ... with 17 more variables: lat <dbl>, lng <dbl>, timezone <chr>,
## #   radius_in_miles <dbl>, area_code_list <blob>, population <int>,
## #   population_density <dbl>, land_area_in_sqmi <dbl>,
## #   water_area_in_sqmi <dbl>, housing_units <int>,
## #   occupied_housing_units <int>, median_home_value <int>,
## #   median_household_income <int>, bounds_west <dbl>, bounds_east <dbl>,
## #   bounds_north <dbl>, bounds_south <dbl>
```

We can use this `reverse_zipcode()` to pull census data later on for any or all ZIP code areas we might be interested in.

```
# Pull data for all ZIP codes in the dataset
#zipdata <- reverse_zipcode( vax$zip_code_tabulation_area )
```

*#Focus on San Diego County*

We will subset with base R

```
inds <- vax$county == "San Diego"
head(vax[inds,])
```

```
##   as_of_date zip_code_tabulation_area local_health_jurisdiction  county
## 5  2021-01-05                92155             San Diego San Diego
## 14 2021-01-05                92147             San Diego San Diego

```

But let's use the **dplyr** package and its **filter()**\* function:

```
library(dplyr)
```

```
##
## Attaching package: 'dplyr'

## The following objects are masked from 'package:stats':
##
## filter, lag

## The following objects are masked from 'package:base':
##
## intersect, setdiff, setequal, union
```

```
sd <- filter(vax, county == "San Diego")
nrow(sd)
```

```
## [1] 4922
```

Q11. How many distinct zip codes are listed for San Diego County?

```
length(unique(sd$zip_code_tabulation_area))
```

```
## [1] 107
```

107 distinct zip codes

Q12. What San Diego County Zip code area has the largest 12 + Population in this dataset?

```
sd[which.max(sd$age12_plus_population),]
```

```
##   as_of_date zip_code_tabulation_area local_health_jurisdiction   county
## 23 2021-01-05                92154                San Diego San Diego
##   vaccine_equity_metric_quartile                vem_source
## 23                        2 Healthy Places Index Score
##   age12_plus_population age5_plus_population persons_fully_vaccinated
## 23                76365.2                82971                32
##   persons_partially_vaccinated percent_of_population_fully_vaccinated
## 23                1336                0.000386
##   percent_of_population_partially_vaccinated
## 23                0.016102
##   percent_of_population_with_1_plus_dose redacted
## 23                0.016488                No
```

92154

What is the population in the 92037 ZIP code area?

```
filter(sd, zip_code_tabulation_area == "92037")[1,]
```

```
##   as_of_date zip_code_tabulation_area local_health_jurisdiction   county
## 1 2021-01-05                92037                San Diego San Diego
##   vaccine_equity_metric_quartile                vem_source
## 1                        4 Healthy Places Index Score
##   age12_plus_population age5_plus_population persons_fully_vaccinated
## 1                33675.6                36144                44
##   persons_partially_vaccinated percent_of_population_fully_vaccinated
## 1                1265                0.001217
##   percent_of_population_partially_vaccinated
## 1                0.034999
##   percent_of_population_with_1_plus_dose redacted
## 1                0.036216                No
```

36144

Q13. What is the overall average “Percent of Population Fully Vaccinated” value for all San Diego “County” as of “2021-11-09”?

```
mean((filter(vax, county == "San Diego" & as_of_date == "2021-11-09"))$percent_of_population_fully_vaccinated)
```

```
## [1] 0.6727567
```

67%

```
sd.now <- filter(sd, as_of_date == "2021-11-09")
mean(sd.now$percent_of_population_fully_vaccinated, na.rm = TRUE)
```

```
## [1] 0.6727567
```

67%

We can look at the 6-number summary

```
sd.sum <- summary(sd.now$percent_of_population_fully_vaccinated)
sd.sum
```

```
##      Min. 1st Qu.  Median    Mean 3rd Qu.    Max.      NA's
## 0.01017 0.60776 0.67700 0.67276 0.76164 1.00000         4
```

Q14. Using either ggplot or base R graphics make a summary figure that shows the distribution of Percent of Population Fully Vaccinated values as of “2021-11-09”?

```
hist(sd.now$percent_of_population_fully_vaccinated)
```

```
library(ggplot2)
ggplot(sd.now) +
  aes(percent_of_population_fully_vaccinated)+geom_histogram(bin=15)
```

```
## Warning: Ignoring unknown parameters: bin

## `stat_bin()` using `bins = 30`. Pick better value with `binwidth`.

## Warning: Removed 4 rows containing non-finite values (stat_bin).
```

What about 92037 - UCSD/ La Jolla

```
LJ <- filter(sd.now, zip_code_tabulation_area == "92037")
LJ
```

```
##   as_of_date zip_code_tabulation_area local_health_jurisdiction   county
## 1 2021-11-09                92037                San Diego San Diego
##   vaccine_equity_metric_quartile                vem_source
## 1                        4 Healthy Places Index Score
##   age12_plus_population age5_plus_population persons_fully_vaccinated
## 1             33675.6             36144             32859
##   persons_partially_vaccinated percent_of_population_fully_vaccinated
## 1                6354                                0.909114
##   percent_of_population_partially_vaccinated
## 1                                0.175797
##   percent_of_population_with_1_plus_dose redacted
## 1                                1          No
```

91% fully vaccinated

Q15. Using ggplot make a graph of the vaccination rate time course for the 92037 ZIP code area:

```
ucsd <- filter(sd, zip_code_tabulation_area=="92037")
ucsd[1,]$age5_plus_population
```

```
## [1] 36144
```

```
ggplot(ucsd) +
  aes(as_of_date,
      percent_of_population_fully_vaccinated) +
  geom_point() +
  geom_line(group=1) +
  ylim(c(0,1)) +
  labs(x= "Date", y="Percent Vaccinated")
```

```
##Time series of vaccination rate for 92037
```

```
# Subset to all CA areas with a population as large as 92037
vax.36 <- filter(vax, age5_plus_population > 36144 &
  as_of_date == "2021-11-16")
head(vax.36)
```

```
##   as_of_date zip_code_tabulation_area local_health_jurisdiction    county
## 1 2021-11-16                92833                Orange    Orange
```

```

## 2 2021-11-16          92234          Riverside    Riverside
## 3 2021-11-16          92507          Riverside    Riverside
## 4 2021-11-16          92555          Riverside    Riverside

## 5          0.526351          No
## 6          0.756446          No

```

Q16. Calculate the mean “Percent of Population Fully Vaccinated” for ZIP code areas with a population as large as 92037 (La Jolla) as\_of\_date “2021-11-16”. Add this as a straight horizontal line to your plot from above with the `geom_hline()` function?

```
mean(vax.36$percent_of_population_fully_vaccinated)
```

```
## [1] 0.6629812
```

```
mean = 66.3%
```

```
ggplot(ucsd) +
  aes(as_of_date,
      percent_of_population_fully_vaccinated) +
  geom_point() +
  geom_line(group=1) +
  ylim(c(0,1)) +
  labs(x= "Date", y="Percent Vaccinated") +
  geom_hline(yintercept = 0.66, colour = "red", linetype = 2)
```

Q17. What is the 6 number summary (Min, 1st Qu., Median, Mean, 3rd Qu., and Max) of the “Percent of Population Fully Vaccinated” values for ZIP code areas with a population as large as 92037 (La Jolla) as\_of\_date “2021-11-16”?

```
summary(vax.36$percent_of_population_fully_vaccinated)
```

```
##      Min. 1st Qu.  Median    Mean 3rd Qu.    Max.
## 0.3519 0.5891 0.6649 0.6630 0.7286 1.0000
```

```
Min. 1st Qu. Median Mean 3rd Qu. Max. 0.3519 0.5891 0.6649 0.6630 0.7286 1.0000
```

Q18. Using ggplot generate a histogram of this data.’

```
ggplot(vax.36) +
  aes(percent_of_population_fully_vaccinated)+geom_histogram(bin=15) +
  labs(x= "Percent Vaccinated", y="Count")+
  xlim(c(0,1))+
  ylim(c(0,60))
```

```
## Warning: Ignoring unknown parameters: bin
```

```
## `stat_bin()` using `bins = 30`. Pick better value with `binwidth`.
```

```
## Warning: Removed 2 rows containing missing values (geom_bar).
```

Q19. Is the 92109 and 92040 ZIP code areas above or below the average value you calculated for all these above?

```
reverse_zipcode(c('92109', "92040") )
```

```
## # A tibble: 2 x 24
##   zipcode zipcode_type major_city post_office_city common_city_list county state
##   <chr>    <chr>        <chr>    <chr>                <blob> <chr>  <chr>
## 1 92040    Standard    Lakeside  Lakeside, CA          <raw 20 B> San D~ CA
## 2 92109    Standard    San Diego  San Diego, CA          <raw 21 B> San D~ CA
## # ... with 17 more variables: lat <dbl>, lng <dbl>, timezone <chr>,
```

```
## # radius_in_miles <dbl>, area_code_list <blob>, population <int>,
## # population_density <dbl>, land_area_in_sqmi <dbl>,
## # water_area_in_sqmi <dbl>, housing_units <int>,
## # occupied_housing_units <int>, median_home_value <int>,
## # median_household_income <int>, bounds_west <dbl>, bounds_east <dbl>,
## # bounds_north <dbl>, bounds_south <dbl>
```

```
vax %>% filter(as_of_date == "2021-11-16") %>%
  filter(zip_code_tabulation_area=="92040") %>%
  select(percent_of_population_fully_vaccinated)
```

```
## percent_of_population_fully_vaccinated
## 1 0.520463
```

92040 or Lakeside is below the average value (.6630)

```
vax %>% filter(as_of_date == "2021-11-16") %>%
  filter(zip_code_tabulation_area=="92109") %>%
  select(percent_of_population_fully_vaccinated)
```

```
## percent_of_population_fully_vaccinated
## 1 0.687763
```

92109 or San Diego is above the average value (.6630)

Q20. Finally make a time course plot of vaccination progress for all areas in the full dataset with a age5\_plus\_population > 36144

First we need to subset the full vax dataset to include onl ZIP code areas with a population as large as 92037

```
vax.36.all <- filter(vax, age5_plus_population > 36144)
```

How many unique zip codse have a population as large as 92037?

```
length(unique(vax.36.all$zip_code_tabulation_area))
```

```
## [1] 411
```

```
ggplot(vax.36.all) +
  aes(as_of_date,
      percent_of_population_fully_vaccinated,
      group=zip_code_tabulation_area) +
  geom_line(alpha=0.2, color="blue") +
  ylim(c(0,1.00)) +
  labs(x="Date", y="Percent Vaccinated",
       title="Vaccinte rate across California",
       subtitle="Only areas with a population above 36k are shown") +
  geom_hline(yintercept = 0.6630, linetype=2)
```

```
## Warning: Removed 180 row(s) containing missing values (geom_path).
```

## Vaccinte rate across California

Only areas with a population above 36k are shown

Q21. How do you feel about traveling for Thanksgiving and meeting for in-person class next Week?

I feel more anxious now that I see that still a huge proportion of areas are below the mean vaccination rate and realize that I should be more careful of who I spend the holidays and afterwards with.
